

Microsoft 365

Windows 10

To succeed today, you need the right platform

Microsoft 365, which integrates Windows 10, Office 365, and Enterprise Mobility + Security, helps organizations accelerate digital transformation with a single comprehensive solution.

Now, organizations of all sizes can better:

Unlock creativity

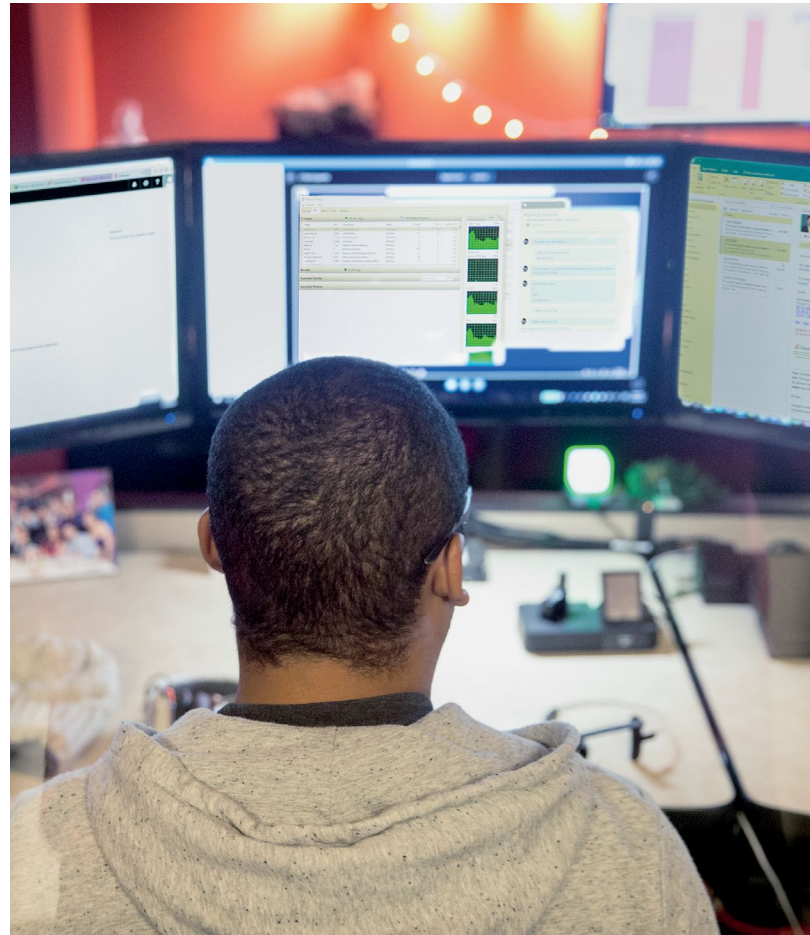

Promote teamwork

Integrate for simplicity

Sustain intelligent security

“We’re using Windows 10, the Microsoft cloud, and Office 365 to work together and get better every day—just as we do across all our race teams.”

Doug Duchardt, General Manager,
Hendrick Motorsports

Gain a more creative, productive workspace

With Windows 10, people can work more easily and intuitively with voice, touch, and digital ink. Office files are automatically stored in the cloud, so that you can share and work on documents in real time. And with Remote Desktop, all you need is an Internet connection to work with files and apps from virtually anywhere. Cortana, a virtual personal assistant, also boosts productivity by helping you stay on top of tasks and meetings.

Simplify management

With flexible deployment options, businesses of all sizes can benefit from Windows 10. You can deploy Windows 10 on Azure with flexible, pay-as-you-go subscriptions, or opt for a more traditional implementation model. Windows 10 provides a familiar experience for end users and IT pros alike, with enhanced management features for deployment, and device and app management.

Choose the latest in device innovation

Design the Microsoft 365 workspace that fits your unique business needs. Windows 10 runs on a wide range of devices—from Surface products to PCs and tablets from multiple vendors.

Embrace digital transformation

In Microsoft 365, Windows 10 is built for transformation, offering enhanced protection against today’s security threats, a collaborative, creative environment for productivity, and flexible deployment options.

More than half a billion devices are already running Windows 10*, giving users the benefit of the latest innovations in advanced security features, including Device Guard, Credential Guard, and Windows Defender Advanced Threat Protection.

Protect devices and infrastructure against modern threats

The safest and most secure Windows ever, Windows 10 provides critical security capabilities that enable organizations to effectively guard against malicious activity. For example, Windows Defender Advanced Threat Detection combines sensors in the operating system with a powerful security cloud service to detect, identify, and respond to threats. In addition, identity protection features such as Windows Hello combine multiple factors, including facial or fingerprint recognition for enterprise-grade security.

*Day, Matt. Microsoft: Windows 10 is running on 500 million devices. The Seattle Times, May 10, 2017. <http://www.seattletimes.com/business/microsoft/microsoft-says-windows-10-is-running-on-500-million-devices/>
